Subject: Consumer opinion
Sensitivity: Personal

Hi,

My name is Marc Spess. I am a consumer of foods just like the millions of other Americans. I believe that organic, and genetically altered foods should be labelled. I wish to know what has been done to the foods I eat, and would like the choice to not eat foods altered if I believe they could have a negative effect on my health. Being quiet about such things, and not placing labels on foods that are altered, creates a people that doubts there governments ability to do its job. It also creates fear that whatever food you eat, may be altered, possibly making people sick, and who will be to blame? The answer to that should be easy. Please make sure that labels are put on genetically altered foods.

Thank you
Marc Spess
